Only the best: Abacus Business Software hosted in Switzerland

Abacus is the leading Swiss software solution for the digitalisation of business processes. With Abacus, you get a fully integrated ERP system that covers all areas of your business. Thanks to the innovations of Switzerland's leading manufacturer of ERP software, your company can streamline its processes and eliminate the administrative inefficiencies associated with manual and paper-based management.

Fidigit combines the accounting and administrative expertise of the Fiditam Group with Abacus Business Software.

As an Abacus partner, Fidigit – a Fiditam Group company – will support you at every stage of your digital transformation project. Whether you need help with an implementation project, an upgrade or simply require software support, our experts are on hand to assist.

**Yes to the cloud.
Yes to maximum data security.
Yes to the best data protection.**

Want to provide your Abacus Business Software in the cloud rather than in your company?
Want flexible scalability, maximum data security and the best data protection for your Abacus Business applications?

No problem. We will take care of it.

**Use your Abacus solution
in our Fidigit Private Cloud.**

Our Private Cloud powered by Tinext offers many of the advantages of a public cloud, such as self-service, scalability and elasticity, while relieving you of the responsibility and burden of a self-hosted data centre. This means that you can enable your employees and business partners to access the chosen Abacus applications anywhere, anytime via a secure internet connection without having to manage the underlying IT infrastructure.

Fidigit takes care of the entire operation of your Abacus solution on a personal application server, including regular updates, backups and disaster recovery.

Your data is in good hands

1 Quality and availability

- Your dedicated Abacus application server is hosted in a TIER 3 data centre in Switzerland by our business partner Tinext.
- TIER 3 data centres offer all the necessary protective measures when it comes to physical security, access control, smoke detection and fire-fighting systems.
- If desired, we can provide you with dedicated data connections via a fibre-optic infrastructure for optimum internet access.

2 Data protection and security

- Your private cloud is secure and offers comprehensive data protection.
- Our datacenter is certified in accordance with ISO 27001 and ISO 27018.
- Your private cloud is incorporated in a certified information security management system (ISMS) that is certified in accordance with UNI-EN ISO/IEC 27001:2017 and protected against internet risks.
- ISO 27018 is an international standard for data protection in the cloud and expands on the ISO 27001 information security standard.

- Our datacenter has joined the Swiss Made Software label and guarantees Swiss data sovereignty. The certainty that all infrastructure is located in Switzerland and that the company does not have any investors from outside Switzerland ensures that stored data is subject exclusively to Swiss law.
- If required, we can provide comprehensive disaster recovery services in Switzerland.

3 **Transparent cost planning**

- Our Private Cloud service works on a pay-per-use basis.
- There is no monthly fee. You only pay when you actually use the service.
